

Docket No. NEC N01268  
Serial No. 09/855,971  
Supplemental Amendment A

**AMENDMENTS TO THE CLAIMS:**

Please cancel claims 9, 10, 12 and 16-18, without prejudice, and amend claims 1-4, 6-8, 13 and 14, and add new claim 19, as shown below.

This listing of claims will replace all prior versions and listings of claims in the Application:

**Claim 1 (currently amended).** A commercial message transmitting and receiving system for transmitting and receiving commercial message materials comprising:

an advertiser terminal to distribute a plurality of said commercial message materials and a plurality of pieces of commercial message/identification information each corresponding to each of said plurality of said commercial message materials over a same channel and during a same time period;

a broadcast station terminal to create and output a scaled-down and synthesized **[[image]] images** obtained by scaling down and synthesizing each of images of said plurality of said commercial message materials and multi-channeled voices obtained by assigning each of voices of said plurality of said commercial message materials to one of a plurality of voice channels **[[each]]** being different from each other and, at a same time, to synthesize and output said plurality of pieces of said commercial message/identification information;

a transmitting device to modulate said scaled-down and synthesized **[[image]] images** and said multi-channeled voices fed from said broadcast station terminal and to transmit them as program data and, at a same time, to modulate and transmit said plurality of pieces of said commercial message/identification information fed from said broadcast station terminal;

Docket No. NEC N01268  
Serial No. 09/855,971  
Supplemental Amendment A

a receiving terminal to automatically select, based on said plurality of pieces of said commercial message/identification information transmitted from said transmitting device and viewer [[input]] set in advance, one commercial message material out of said plurality of pieces of said commercial message information materials fed as said scaled-down and synthesized [[image]] images and said multi-channeled voices from said transmitting device and to expand and display images of [[said]] the one commercial message materials automatically selected out of said plurality of said commercial message materials contained in said scaled-down and synthesized images and, at a same time, to output voices of said voice channels of [[said]] the one commercial message materials automatically selected out of said plurality of said voice channels contained in said multi-channeled voices

wherein said ~~viewer manually selects one commercial message material out of said plurality of said commercial messages~~ receiving terminal is provided with a view attribute setting section which the viewer uses to set and store the attribute information of the viewer in advance; and

wherein the attribute information includes at least information about an age, a sex and a preference of the viewer, and is read from said viewer attribute setting section, to automatically select the one commercial message material out of said plurality of said commercial message materials.

**Claim 2 (currently amended):** The commercial message transmitting and receiving system according to claim 1, wherein said receiving terminal transmits [[said]] the commercial message/identification information of [[said]] the one commercial message material and said attribute information of [[said]] the viewer automatically selected to said advertiser terminal

through a network and wherein said advertiser terminal performs statistical processing of said commercial message/identification information transmitted from said transmitting device and said attribute information of [[said]] the viewer.

**Claim 3 (currently amended):** The commercial message transmitting and receiving system according to claim 1, wherein said transmitting device, when said scaled-down and synthesized image and said multi-channelled voices are transmitted by analog broadcasting, transmits said commercial message/identification information by using a vertical blanking interval and, when said scaled-down and synthesized [[image]] images and said multi-channelled voices are transmitted by digital broadcasting, transmits said commercial message/identification information as section information or packetized elementary stream information.

**Claim 4 (currently amended):** The commercial message transmitting and receiving system according to claim 2, wherein said receiving terminal comprises:

a viewer attribute setting section to store said attribute information of [[said]] the viewer [[input]] set in advance;

a viewer attribute processing section to select one commercial message material based on said viewer's selection out of said plurality of said commercial message materials transmitted as said scaled-down and synthesized [[image]] images and said multi-channelled voices from said transmitting device;

an image cutting/expanding section to cut and expand images of [[said]] the one commercial message materials selected by said viewer attribute processing section out of images of said plurality of said commercial message materials contained in said scaled-down and synthesized [[image]] images transmitted from said transmitting device;

Supplemental Amendment A

a voice channel selecting section to select voice channels of [[said]] the one commercial message materials selected by said viewer attribute processing section out of said plurality of said voice channels contained in said multi-channeled voices transmitted from said transmitting device;

a switching section to select either of said scaled-down synthesized images transmitted from said transmitting device or said images out of images output from said image cutting/expanding section;

a display to display images output from said switching section;

a speaker to output voices of said voice channels selected by said voice channel selecting section;

a selected commercial message database to store [[said]] the commercial message/identification information of [[said]] the one commercial message materials and said attribute information of said viewers selected by [[said]] the viewer attribute processing section; and

a communication section to transmit [[said]] the commercial message/identification information and said attribute information of [[said]] the viewers stored in said selected commercial message database to said advertiser terminal through said network.

**Claim 5 (canceled)**

**Claim 6 (currently amended):** The commercial message transmitting and receiving system according to claim 4, wherein said advertiser terminal has a statistical processing section of performing statistical processing of said commercial message/identification information and

Supplemental Amendment A

~~scaled down and synthesized images is selected, images of [[said]] the one commercial message material manually selected and, at a same time, to output outputs voices of said voice channels of [[said]] the one commercial message materials material manually selected out of said plurality of voice channels contained in said multi-channeled voices wherein said viewer manually selects one commercial message material out of said plurality of said commercial messages.~~

**Claim 8 (currently amended):** The commercial message transmitting and receiving system according to claim 7, wherein said receiving terminal transmits [[said]] the commercial message/identification information of [[said]] the one commercial message material and attribute information of [[said]] the viewer manually selected to said advertiser terminal through a network and wherein said advertiser terminal performs statistical processing of said commercial message/identification information transmitted from said transmitting device and attribute information of [[said]] the viewer.

**Claim 9-12 (canceled)**

**Claim 13 (currently amended):** A commercial message transmitting and receiving method, comprising:

a step of distributing a plurality of commercial message materials and a plurality of pieces of commercial message/identification information each corresponding to each of said plurality of said commercial message materials over a same channel and during a same time period from an advertiser terminal to a broadcast station terminal;

Docket No. NBC N01268  
Serial No. 09/855,971  
Supplemental Amendment A

**Claim 15 (previously presented):** The commercial message transmitting and receiving method according to claim 13, wherein said transmitting device, when said scaled-down and said synthesized image and said multi-channelled voices are transmitted by analog broadcasting, transmits said commercial message/identification information by using the vertical blanking interval and, when said scaled-down and said synthesized image and said multi-channelled voices are transmitted by digital broadcasting, transmits said commercial message/identification information as section information or as packetized elementary stream information.

**Claims 16-18 (canceled)**

**Claim 19 (new):** The commercial message transmitting and receiving system according to claim 4, wherein said viewer attribute processing section is able to automatically and manually select one commercial message material out of said plurality of said commercial message materials transmitted as said scaled-down and synthesized images and said multi-channelled voices from said transmitting device, based on said plurality of pieces of said commercial message/identification information transmitted from said transmitting device and said attribute information of the viewers stored in said viewer attribute setting section.
